2020 SESSION

HOUSE BILL NO. 889

A BILL to amend and reenact § 56-577 of the Code of Virginia, relating to electric utility regulation; retail competition.

Patron Prior to Engrossment—Delegate Mullin

Referred to Committee on Labor and Commerce

Be it enacted by the General Assembly of Virginia:

1. That § 56-577 of the Code of Virginia is amended and reenacted as follows:

§ 56-577. Schedule for transition to retail competition; Commission authority; exemptions; pilot programs.

A. Retail competition for the purchase and sale of electric energy shall be subject to the following provisions:

1. Each incumbent electric utility owning, operating, controlling, or having an entitlement to transmission capacity shall join or establish a regional transmission entity, which entity may be an independent system operator, to which such utility shall transfer the management and control of its transmission system, subject to the provisions of § 56-579.

2. The generation of electric energy shall be subject to regulation as specified in this chapter.

3. Subject to the provisions of subdivisions 4 and 5, only individual retail customers of electric energy within the Commonwealth, regardless of customer class, whose demand during the most recent calendar year exceeded five megawatts but did not exceed one percent of the customer’s incumbent electric utility’s peak load during the most recent calendar year unless such customer had noncoincident peak demand in excess of 90 megawatts in calendar year 2006 or any year thereafter, shall be permitted to purchase electric energy from any supplier of electric energy licensed to sell retail electric energy within the Commonwealth, except for any incumbent electric utility other than the incumbent electric utility serving the exclusive service territory in which such a customer is located, subject to the following conditions:

a. If such customer does not purchase electric energy from licensed suppliers, such customer shall purchase electric energy from its incumbent electric utility.

b. Except as provided in subdivision 4, the demands of individual retail customers may not be aggregated or combined for the purpose of meeting the demand limitations of this provision, any other provision of this chapter to the contrary notwithstanding. For the purposes of this section, each noncontiguous site will nevertheless constitute an individual retail customer even though one or more such sites may be under common ownership of a single person; however, to the extent that such single person purchases electric energy from a licensed supplier and such electric energy is composed of a percentage of renewable energy equal to or greater than [the percentages of the renewable energy portfolio standard program (RPS) goals set out in subsection D of § 56-585.2 as of January 1, 2020, and no less than] the percentage of renewable energy that the licensed supplier is required to provide pursuant to any renewable energy portfolio standard [that is subsequently] established in this chapter, such single person shall constitute a single retail customer, notwithstanding that service is provided to noncontiguous sites.

c. If such customer does purchase electric energy from licensed suppliers after the expiration of the three-year notice requirement, such customer may thereafter purchase electric energy at the costs of such utility, as determined by the Commission pursuant to subdivision 3 d hereof, for the remainder of the three-year notice period, after which point the customer may purchase electric energy from the utility under rates, terms and conditions determined pursuant to § 56-585.1. However, such customer shall be allowed to individually purchase electric energy from the utility under rates, terms, and conditions determined pursuant to § 56-585.1 if, upon application by such customer, the Commission finds that neither such customer’s incumbent electric utility nor retail customers of such utility that do not choose to obtain electric energy from alternate suppliers will be
adversely affected in a manner contrary to the public interest by granting such petition. In making such
determination, the Commission shall take into consideration, without limitation, the impact and effect of
any and all other previously approved petitions of like type with respect to such incumbent electric
utility. Any customer that returns to purchase electric energy from its incumbent electric utility, before
or after expiration of the five-year three-year notice period, shall be subject to minimum stay periods
equal to those prescribed by the Commission pursuant to subdivision C 1.

d. The costs of serving a customer that has received an exemption from the five-year three-year
notice requirement under subdivision 3 c hereof shall be the market-based costs of the utility, including
(i) the actual expenses of procuring such electric energy from the market, (ii) additional administrative
and transaction costs associated with procuring such energy, including, but not limited to, costs of
transmission, transmission line losses, and ancillary services, and (iii) a reasonable margin as determined
pursuant to the provisions of subdivision A 2 of § 56-585.1. The methodology established by the
Commission for determining such costs shall ensure that neither utilities nor other retail customers are
adversely affected in a manner contrary to the public interest.

4. Two or more individual nonresidential retail customers of electric energy within the
Commonwealth, whose individual demand during the most recent calendar year did not exceed five
megawatts, may petition the Commission for permission to aggregate or combine their demands, for the
purpose of meeting the demand limitations of subdivision 3, so as to become qualified to purchase
electric energy from any supplier of electric energy licensed to sell retail electric energy within the
Commonwealth under the conditions specified in subdivision 3. The Commission may, after notice and
opportunity for hearing, approve such petition if it finds that:

a. Neither such customers’ incumbent electric utility nor retail customers of such utility that do not
choose to obtain electric energy from alternate suppliers will be adversely affected in a manner contrary
to the public interest by granting such petition. In making such determination, the Commission shall take
into consideration, without limitation, the impact and effect of any and all other previously approved
petitions of like type with respect to such incumbent electric utility; and

b. Approval of such petition is consistent with the public interest.

If such petition is approved, all customers whose load has been aggregated or combined shall
thereafter be subject in all respects to the provisions of subdivision 3 and shall be treated as a single,
individual customer for the purposes of said subdivision. In addition, the Commission shall impose
reasonable periodic monitoring and reporting obligations on such customers to demonstrate that they
continue, as a group, to meet the demand limitations of subdivision 3. If the Commission finds, after
notice and opportunity for hearing, that such group of customers no longer meets the above demand
limitations, the Commission may revoke its previous approval of the petition, or take such other actions
as may be consistent with the public interest.

5. Individual retail customers of electric energy within the Commonwealth, regardless of customer
class, shall be permitted:

a. To purchase electric energy provided 100 percent from renewable energy from any supplier of
electric energy licensed to sell retail electric energy within the Commonwealth, other than any
incumbent electric utility that is not the incumbent electric utility serving the exclusive service territory
in which such a customer is located, if the incumbent electric utility serving the exclusive service
territory does not offer an approved tariff for electric energy provided 100 percent from renewable
energy; and

b. To continue purchasing renewable energy pursuant to the terms of a power purchase agreement in
effect on the date there is filed with the Commission a tariff for the incumbent electric utility that serves
the exclusive service territory in which the customer is located to offer electric energy provided 100
percent from renewable energy, for the duration of such agreement.

6. To the extent that an incumbent electric utility has elected as of February 1, 2019, the Fixed
Resource Requirement alternative as a Load Serving Entity in the PJM Region and continues to make
such election and is therefore required to obtain capacity for all load and expected load growth in its
service area, any customer of a utility subject to that requirement that purchases energy pursuant to
subdivision 3 or 4 from a supplier licensed to sell retail electric energy within the Commonwealth shall
continue to pay its incumbent electric utility for the non-fuel generation capacity and transmission
related costs incurred by the incumbent electric utility in order to meet the customer’s capacity
obligations, pursuant to the incumbent electric utility’s standard tariff that has been approved by and is
on file with the Commission. In the case of such customer, the advance written notice period established
in subdivisions 3 c and d shall be three years. This subdivision shall not apply to the customers of
licensed suppliers that (i) had an agreement with a licensed supplier entered into before February 1,
2019, or (ii) had aggregation petitions pending before the Commission prior to January 1, 2019, unless
and until any customer referenced in clause (i) or (ii) has returned to purchase electric energy from its
incumbent electric utility, pursuant to the provisions of subdivision 3 or 4, and is receiving electric
energy from such incumbent electric utility.
7. Notwithstanding anything to the contrary in this section, cooperative customers that are eligible to purchase from licensed suppliers shall be subject to the following additional conditions:

a. A tariff for one or more classes of residential customers filed with the Commission for approval by a cooperative on or after July 1, 2010, shall be deemed to offer a tariff for electric energy provided 100 percent from renewable energy if it provides undifferentiated electric energy and the cooperative retires a quantity of renewable energy certificates equal to 100 percent of the electric energy provided pursuant to such tariff. A tariff for one or more classes of nonresidential customers filed with the Commission for approval by a cooperative on or after July 1, 2012, shall be deemed to offer a tariff for electric energy provided 100 percent from renewable energy if it provides undifferentiated electric energy and the cooperative retires a quantity of renewable energy certificates equal to 100 percent of the electric energy provided pursuant to such tariff. For purposes of this section, "renewable energy certificate" means, with respect to cooperatives, a tradable commodity or instrument issued by a regional transmission entity or affiliate or successor thereof in the United States that validates the generation of electricity from renewable energy sources or that is certified under a generally recognized renewable energy certificate standard. One renewable energy certificate equals 1,000 kWh or one MWh of electricity generated from renewable energy. A cooperative offering electric energy provided 100 percent from renewable energy pursuant to this subdivision that involves the retirement of renewable energy certificates shall disclose to its retail customers who express an interest in purchasing energy pursuant to such tariff (i) that the renewable energy is comprised of the retirement of renewable energy certificates, (ii) the identity of the entity providing the renewable energy certificates, and (iii) the sources of renewable energy being offered. A cooperative customer eligible to take service under a tariff for electric energy provided 100 percent from renewable energy shall not purchase electric energy provided 100 percent from renewable energy from a licensed supplier pursuant to subdivision 5, except such customer may continue purchasing renewable energy pursuant to the terms of a power purchase agreement in effect on the date the cooperative serving it filed with the Commission such tariff for electric energy provided 100 percent from renewable energy, as set forth in this subdivision, for the duration of such agreement; and

b. If a cooperative customer takes service from a licensed supplier pursuant to subdivision 3, (i) the advance written notice period established in subdivisions 3 c and 3 d shall be five years; (ii) notwithstanding the provisions of subdivision 3 b, each noncontiguous site shall nevertheless constitute an individual retail customer even though one or more such sites may be under common ownership of a single person; and (iii) no aggregation of demand shall be permitted except as provided in subdivision 4.

B. The Commission shall promulgate such rules and regulations as may be necessary to implement the provisions of this section.

C. 1. By January 1, 2002, the Commission shall promulgate regulations establishing whether and, if so, for what minimum periods, customers who request service from an incumbent electric utility pursuant to subsection D of § 56-582 or a default service provider, after a period of receiving service from other suppliers of electric energy, shall be required to use such service from such incumbent electric utility or default service provider, as determined to be in the public interest by the Commission.

2. Subject to (i) the availability of capped rate service under § 56-582, and (ii) the transfer of the management and control of an incumbent electric utility's transmission assets to a regional transmission entity after approval of such transfer by the Commission under § 56-579, retail customers of such utility (a) purchasing such energy from licensed suppliers and (b) otherwise subject to minimum stay periods prescribed by the Commission pursuant to subdivision 1, shall nevertheless be exempt from any such minimum stay obligations by agreeing to purchase electric energy at the market-based costs of such utility or default providers after a period of obtaining electric energy from another supplier. Such costs shall include (i) the actual expenses of procuring such electric energy from the market, (ii) additional administrative and transaction costs associated with procuring such energy, including, but not limited to, costs of transmission, transmission line losses, and ancillary services, and (iii) a reasonable margin. The methodology of ascertaining such costs shall be determined and approved by the Commission after notice and opportunity for hearing and after review of any plan filed by such utility to procure electric energy to serve such customers. The methodology established by the Commission for determining such costs shall be consistent with the goals of (a) promoting the development of effective competition and economic development within the Commonwealth as provided in subsection A of § 56-596, and (b) ensuring that neither incumbent utilities nor retail customers that do not choose to obtain electric energy from alternate suppliers are adversely affected.

3. Notwithstanding the provisions of subdivision D of § 56-582 and subsection C of § 56-585, however, any such customers exempted from any applicable minimum stay periods as provided in subdivision 2 shall not be entitled to purchase retail electric energy thereafter from their incumbent electric utilities, or from any distributor required to provide default service under subsection B of
§ 56-585, at the capped rates established under § 56-582, unless such customers agree to satisfy any minimum stay period then applicable while obtaining retail electric energy at capped rates.

4. The Commission shall promulgate such rules and regulations as may be necessary to implement the provisions of this subsection, which rules and regulations shall include provisions specifying the commencement date of such minimum stay exemption program.

2. That the State Corporation Commission (the Commission) shall update its consumer protection regulations relating to the availability of service through licensed suppliers pursuant to § 56-577 of the Code of Virginia, as amended by this act, by implementing one or more of the following: (i) developing a consumer education website funded through an assessment on licensed suppliers and through the use of Commission's regulatory tax revenues, (ii) issuing a quarterly report in the form of a customer satisfaction scorecard based on the number of complaints received regarding competitive service providers per 1,000 customers, and (iii) supplementing existing rules with an additional enforcement mechanism to enable the Commission to take timely action in the event that a licensed supplier engages in unscrupulous activity in making sales to retail customers. [The regulations enacted under this act shall not apply to a licensed supplier that only serves one or more retail customers who are an affiliate, a subsidiary, or under the same corporate parent as the licensed supplier.] The Commission shall commence such update by October 1, 2020.
